

THE QCE ELECTRONIC EGG Seeks out the areas where eggs could become cracked or damaged

Cracked or damaged eggs cost the industry big money. For example a reduction of only 1% in breakages from a 20,000 bird laying unit will give over 56,000 extra eggs to sell in the laying flock's life. This potentially provides an income of 10 times the investment made in purchasing the QCE Electronic Egg.

Unfortunately, detecting exactly where eggs become damaged during production, grading or packing operations can be an almost impossible task, even to the most trained eye.

Fortunately, all is not lost.

The TSS QCE (quality control egg) is an egg-shaped, electronic device capable of indicating danger areas on automatic egg handling conveyors, laying cages and other egg conveying systems.

Placed among 'real' eggs, its bright green and red warning lights pinpoint with great accuracy any potential problem areas where eggs may become damaged.

The QCE's advanced electronic circuitry detects all shocks, above a predetermined level, to which it is subjected.

If it is hit on the ends, the green lights illuminate. If it is hit in any other area, the red lights come on. If it is subjected to particularly severe impact, all lights are activated for approximately four seconds, giving the observer ample time to locate and rectify the problem.

The QCE can be set to trigger at various degrees of impact, with adjustments via two gold-plated screws taking only a few minutes.

Detailed operating instructions are supplied. The QCE is CE approved and carries a 2-year warranty covering both parts and labour.

A large return for a small investment

FIVE BENEFITS OF BUYING FROM THE WORLD'S LEADING MANUFACTURER

- ◆ Over 10 years' proven performance and reliability
- ◆ Fast and accurate measurements
- ◆ 2-year warranty
- ◆ More for your money
- ◆ Full in-house technical support
